

Welcome

Thank you for choosing Arlo.

Keep reading for important info to help you get your new Arlo System up and running.

If you need help, contact Arlo before returning your product to the store. Most questions can be answered through our online support center at arlo.com/support.

What's in the box

Arlo Wire-Fr Camera

Lithium 123 battery

Base station power adapter (varies by region)

Ethernet cable

Wall mount

Mounting screws and anchors

Get the app

Download the free Arlo app to get started.

The Arlo app guides you through the setup and installation of your base station and camera.

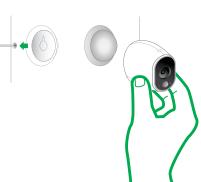

Place or mount your camera

You can place your camera on a flat surface or you can mount it to a wall. Choose a location with a clear, unblocked field of view and with a good signal to your base station.

Note: WiFi range can be affected by building materials or objects that block WiFi signals and by interference from other WiFi networks.

> To use the wall mount:

- Fasten the mounting screw into the wall.
 If you're mounting the camera to drywall, use the plastic drywall anchors that are provided.
- 2. Hang the mount from the screw.

Helpful tips

Motion detection

To optimize motion detection, do the following:

- Mount your Arlo camera at least 7 feet (2.1 meters) above the floor or ground and angle it slightly downward.
- Place your camera within 10-15 feet (3.0-4.6 meters) of where motion is expected.
- Make sure that side-to-side traffic crosses the camera's field of view.
- The best area for motion detection is 5 to 20 feet (1.5 to 6 meters) from the camera position.

Battery life

Use these tips to maximize your camera's battery life:

- Use high quality non-rechargeable batteries.
- Use the Optimized or Best Battery Life power setting.
- Configure your cameras to record shorter videos.
- Position your camera close to your base station, up to a maximum distance of 300 feet (90 meters).
- Do not place your Arlo system near multiple WiFi routers.

These environmental factors can shorten your camera's battery life:

- Placing your cameras in temperatures below 32°F (0°C).
- Placing your cameras in low-light areas that require infrared sensors to work harder.
